ABOUT ME

Software Developer and Systems Engineering student with professional experience in software development and Linux infrastructure administration. I focus on building efficient, maintainable, and user-oriented solutions, with strong attention to code quality and teamwork. I currently work on automation, monitoring, and server maintenance tasks, which provides me with a holistic understanding of production environments where applications are deployed. I am looking to continue growing within development teams where my multidisciplinary background can add value through solid, high-impact solutions.

WORK EXPERIENCE

Linux Infrastructure Administrator

Boreal IT   2025 - Present

- Manage Linux servers (RHEL, CentOS, AlmaLinux, Oracle Linux) in virtualized environments using VMware and vCenter, ensuring system stability and availability.
- Automate operational and maintenance tasks through Bash scripting, optimizing recurring processes and reducing manual errors.
- Monitor critical services and analyze logs to proactively detect incidents and prevent production outages.
- Contribute to the integration of new tools and technologies within the infrastructure, improving system efficiency and scalability.
- Participated in the implementation and standardization of configurations for clients, integrating servers into a centralized logging system, performing configuration and validation tasks in both Linux and Windows environments.
- Performed DNS configuration and management in Google Cloud, ensuring proper domain resolution and service availability.

Technologies: Linux (RHEL, CentOS, AlmaLinux, Oracle Linux), Bash, PowerShell, Git, VMware, vCenter, Docker, MySQL, PostgreSQL, Oracle, SQL Server, CheckMK, PRTG, Percona PMM, Google Cloud

Desarrollador Full Stack

Unveil Creators Corp   2025 - 2025

- Participated in the development of a SaaS product for comprehensive restaurant management, working on both frontend and backend applications for real production environments.
- Collaborated on automated reservation features integrated with WhatsApp and phone calls, using conversational AI for customer interaction and reservation processing.
- Developed business logic for managing tables, zones, reservation statuses, orders, kitchen tickets, payments, and users, ensuring system consistency and scalability.
- Built modern, responsive web interfaces and integrated external APIs and third-party services.
- Implemented integrations with Point of Sale (POS) systems using Square POS for order synchronization and operations, as well as subscription, plans, and add-ons management using Stripe, including billing logic and state control.
- Worked under Agile methodologies (Scrum), participating in daily meetings, sprint planning, reviews, retrospectives, and demos, using Jira for task organization.
- Assisted in deployment and maintenance tasks in production environments, managing multiple environments (development, testing, production) and separate databases to ensure stability and controlled changes.

Technologies: Next.js, React, Node.js, TypeScript, JavaScript, HTML, CSS, Tailwind, Python, FastAPI, Supabase (PostgreSQL), Stripe, Docker, AWS, Vercel, Git, GitHub, REST APIs, Jira

Web Developer

Bugsless Design   2024 - 2025

- Developed multiple websites in collaboration with a development team, prioritizing user experience and overall performance.
- Designed and implemented responsive interfaces optimized for mobile devices, following accessibility standards and best development practices.
- Implemented technical SEO strategies and modular design, improving search engine visibility and facilitating long-term code maintenance.
- Contributed to frontend architecture definition, component modularization, and external API integrations to ensure scalability, reusability, and functional growth of the product.

Technologies: React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind, Node.js, Java, Spring Boot, PostgreSQL, MySQL, Git, GitHub, REST APIs

TECHNICAL SKILLS

- **FrontEnd:** JavaScript, React, NextJS, HTML, CSS, Tailwind Bootstrap
- **BackEnd:** TypeScript, NodeJS, NestJS, Python, FastAPI, Java, Spring Boot, Bash, PowerShell, C
- **Databases:** PostgreSQL, MySQL, MariaDB, Oracle, SQL Server, Supabase
- **Infrastructure:** Linux (RHEL, CentOS, AlmaLinux, Oracle Linux), VMware, vCenter, VirtualBox, CheckMK, PRTG, Percona PMM
- **DevOps & Cloud:** Docker, Google Cloud, AWS, Vercel, CI/CD, GitHub Actions
- **Tools:** Git, GitHub, Jira, Swagger, Postman

SOFT SKILLS

- Effective communication in multidisciplinary teams
- Technical problem-solving and decision-making
- Collaborative teamwork with a results-oriented mindset
- Adaptability to dynamic environments and new technologies
- Critical thinking and analytical approach
- Self-learning and continuous improvement

LANGUAGES

- **Spanish:** Native
- **English**: B2

EDUCATION

Universidad Tecnológica Nacional

Systems Engineering   2022 - Present

- Advanced student with a focus on software development, databases, and systems design.
- Participation in integrative academic projects applying course knowledge.

EGG TECH

Full Stack Web Developer   2022 - 2023

- Intensive training in frontend and backend web development using modern technologies.
- Teamwork under SCRUM methodology and development of an integrative project.

Master English Center

English   2016 - 2021

- Level achieved: B2
